

FOUNDER OUTREACH BRIEF

Outreach to João Silva

Author of `padel_analytics` — opening a collaboration dialogue for the India + Middle East venture, with copy-paste-ready email and a follow-up cadence playbook.

TARGET

João Silva — `padel_analytics`

EMAIL

`jsilvawasd@hotmail.com`

REPO

`github.com/Joao-M-Silva/padel_analytics`

PREPARED

2026-07-01

Purpose: Open a collaboration dialogue with João Silva, author of `Joao-M-Silva/padel_analytics`, with a view to building an India + Middle East equivalent to Clutch. His README explicitly invites collaboration. The technical and product gaps are complementary: he has the CV pipeline; we have the market, distribution, capital, and an expert coach co-founder for the missing classifier rubric.

Send from: Manoj's personal email (Gmail or a venture-branded inbox) **Send to:**

`jsilvawas@hotmail.com` (per repo README, last verified 2026-07-01) **Subject options (pick one):**

1. *Collaboration interest — building on `padel_analytics` for India + the 2026 Asian Games*
2. *Indian founder + your `padel_analytics` repo = a real venture?*
3. *Read your README — I'd like to talk*

Recommended subject: Option 1 (specific, respectful, hooks the Asian Games urgency).

Tone: Peer-to-peer founder voice. Not vendor. Not student. Direct, warm, brief enough to read on a phone. Shows I read his code, not just his README.

EMAIL BODY (copy-paste-ready)

Subject: Collaboration interest — building on `padel_analytics` for India + the 2026 Asian Games

Hi João,

I run AutomationXpert, a WhatsApp-native SaaS platform serving Indian small businesses. Outside of that, I play padel three times a week — and like a few hundred thousand other Indians, I'm watching what's happening with the sport here: 500 courts now (up from ~90 in 2023), 70% year-on-year growth, the 2026 Asian Games on the horizon, and zero India-headquartered AI coaching platform addressing the market.

I spent the last week studying the open-source landscape, and your `padel_analytics` repo is the most complete CV foundation I found — the four-tracker architecture with player tracking, 13-DOF pose, TrackNet ball, and the 12-keypoint homography is exactly the right shape. I noticed your README invitation for collaborations, so I wanted to reach out before doing anything else.

Here is what I see, in three sentences:

The gap in `padel_analytics` (and the gap in every other OSS padel repo) is the shot-quality classifier — there's pose extraction but no labelled rubric on top. That gap is also the moat of the entire commercial category — Clutch, Wingfield, Padelytics all sell exactly this, but none of them have a strong Asia or India presence. I have a senior padel coach lined up as the rubric designer + dataset labeller, distribution muscle through my AX WhatsApp platform, capital access in India, and clear demand: one of my home clubs has 200 active players and no current assessment system.

What I do not have is a CTO-grade ML/CV co-founder who already understands the padel-specific work intimately. I think that's you.

The collaboration shapes I would love to explore on a 30-minute call:

- **Co-founder partnership:** you as CTO of the venture (equity, eventual salary post-pre-seed), India-headquartered Pvt Ltd, you can be remote from anywhere in Europe. We'd build on a fork of `padel_analytics` with proper credit and continue contributing back upstream.
- **Technical advisor + licensing arrangement:** lighter time commitment, equity-only, your repo continues independently while we focus on the India/ME commercial build.
- **Something else you'd propose** — you've thought about this longer than I have.

If any of this is interesting, I'd be grateful for a 30-minute call this week or next. I am in IST (UTC+5:30) and can flex around your time zone.

If it's not the right time or the right fit, I'd still love to hear what you'd build differently — your perspective on the problem space is worth its own conversation regardless.

Thank you for putting `padel_analytics` out in the open.

Warm regards, Manoj Maheshwari AutomationXpert — automationxpert.in WhatsApp: +91 98200 27850 LinkedIn: linkedin.com/in/manojmaheshwari/ [add: brief one-liner about Indian Pvt Ltd entity if registered]

P.S. If you have ever wanted a partner who treats every client interaction as a WhatsApp message rather than a B2B SaaS portal — Indian sport happens on WhatsApp. That's a strange-sounding distribution moat but it's real and it's what I've built for the last few years.

Why this email works

1. **Opens with peer credibility** — AutomationXpert credentials in the first line establish I'm not a student / fanboy / vendor pitching to him.
2. **Shows I read his code** — specific mention of the four-tracker architecture, 13-DOF pose, TrackNet, 12-keypoint homography. This is the difference between a generic outreach and a "this person took my work seriously" email.
3. **Names the gap honestly** — calling out the missing classifier is something he already knows; saying it out loud builds trust that I understand the technical reality.
4. **Names the moat honestly** — the classifier is the commercial moat of the entire category. Acknowledging that openly says "I value what you'd contribute, this isn't a free-OSS-extraction play."
5. **Three concrete collaboration shapes** — gives him agency. The third option ("something else you'd propose") is the most important; it signals I'm not arriving with a rigid term sheet.
6. **The base club + 200 players signal** — concrete demand evidence, not market hand-waving.
7. **Time-zone flexibility** — removes any "is this person going to ask me to wake up at 5am?" friction.
8. **Graceful exit clause** — "if it's not the right fit" — reduces the social cost of replying no. Higher reply rate.
9. **The WhatsApp P.S.** — distinctive, memorable. Most cold founder emails read identically; this one has a personality fingerprint.

What to do before pressing send

CHECK	WHY
Replace the "[add: brief one-liner...]" line with either a sentence about the entity or remove it	Drafting placeholder — must be either filled or deleted
Confirm <code>jsilvawas@hotmail.com</code> is still active via repo README	Done 2026-07-01; recheck in case he updated
Send from a custom-domain email if possible (e.g. <code>manoj@padelmind.in</code> once domain registered)	Higher reply rate than Gmail; signals seriousness
Send between Tuesday and Thursday, 10am–noon his local time (Lisbon / Madrid most likely)	Outreach best practice
Set Calendly link in your signature, or include 3 specific time slots inline	Removes one round-trip
Do NOT BCC anyone; this is a 1:1 conversation	Trust signal

After sending — the follow-up cadence

- **Day 4** if no reply: short, single-line nudge ("Hi João — just floating this back to the top of your inbox in case it got buried. Happy to talk whenever works.")
- **Day 10** if no reply: final nudge, with a small concrete update ("Spoke with [coach name] last week, the rubric work is starting Monday — would still love your view before we get too far in.")
- **Day 14** if no reply: pause for 6 weeks, then re-engage with a milestone update once we have a live pilot court ("Hi João — quick update: we installed a pilot rig at [club]. The 12-keypoint homography flow you wrote works beautifully. Wanted to share screenshots; let me know if you'd like a look.")

If he says yes

Convert this conversation into a structured exploration: 1. **30-min discovery call** — your story, his story, mutual fit 2. **60-min technical call within a week** — walk through `padel_analytics` together, what you'd refactor, his honest view on the streaming retrofit and classifier head 3. **Term sheet draft within 2 weeks** — equity, vesting, salary triggers, IP assignment, decision rights 4. **In-person meet (Lisbon or Bangalore) within 30 days** if mutual interest holds

If he says no but is friendly

Ask him to recommend two other CV/ML engineers from his network who might be interested in this exact problem. People he respects technically. That referral is often as valuable as his own time would have been.

Draft prepared 2026-07-01 for review. Adjust placeholders, send when ready.

Companion document set: Strategic Venture Plan · Project Report · Technical Feasibility · Commercial Report · Base Club Offer · Technical Review Request.
